Office 365 Security Assessment

Microsoft Office 365 opens new opportunities to be more creative, productive, collaborative, and to stay connected. Not only does adopting Office 365 drive higher levels of innovation and competitive advantage, but securing your Office 365 environment is essential to protecting the confidentiality, integrity, and availability of intellectual, customer, and personal information stored in the cloud.

WTA Consulting can increase your business continuity by keeping your organization compliant and productive. We can determine if you need help securing the front door. Most organizations are constantly asking these questions:

- Is our information secure in the Office 365 environment?

- Who has access, both internally and externally?

- What if unauthorized users compromise account credentials?

- How can we detect ransomware and other malware in Office 365?

- What do we need to do to maintain compliance and data privacy policies?

Performing **WTA Consulting's O365 Security Assessment** can help keep you and your organization's data safe. WTA Consulting's experienced security consultants can configure the following services to protect your organization's most important resources:

- General Data Protection Regulation
- Data Governance
- Threat Management
- Data Loss Prevention
- Microsoft Secure Score

This structured engagement can help you understand your security posture, identify gaps, and prioritize a roadmap for security controls that will reduce the risk of being breached. After our consultants understand your security objectives, they will provide recommendations to help you balance security and productivity needs. Based on those recommendations, consultants can work with you to plan, prioritize, and implement a strategy that works well with your organization to close Office 365 gaps.

Office 365 Secure Score is a Microsoft security analytics tool that helps increase understanding and awareness of the Office 365 security features and how they can be leveraged to improve your overall security. WTA Consulting can perform re-assessments using the Secure Score tool to improve the security posture of your Office 365 environment.
